PROFESSIONAL SUMMARY

Motivated and detail-oriented AI Developer (Fresher) with hands-on experience in building GenAI-powered applications using LLMs, LangChain, LangGraph, and RAG pipelines. Proficient in Python, FastAPI, and integrating external APIs for real-time data processing. Passionate about developing intelligent systems and AI agents that solve real-world problems. Seeking a challenging role where I can contribute my GenAI and backend development skills while continuously growing in a fast-paced, innovation-driven environment.

EDUCATION

Jharkhand University of Technology | Bokaro, Jharkhand

B.Tech in Electronics & Communication Engineering | CGPA: 7.5/10 | 2022 – 2025

TECHNICAL SKILLS

Programming Languages: Python, JavaScript, SQL

Web Technologies: HTML, CSS, Tailwind CSS

GenAI & AI: LLMs, LangChain, LangGraph, RAG, Prompt Engineering, AI Agents, OpenAI API, Groq API, Vector Databases, Embeddings

Backend & APIs: FastAPI, REST APIs, Pydantic

Tools: Git, GitHub, Netlify, Vercel, Docker

Databases: MySQL, PostgreSQL, ChromaDB, FAISS

Concepts: OOPs, Data Structures, Algorithms, DBMS, Computer Networks

WORK EXPERIENCE

AI Developer

Syncevo Technologies Private Limited, Noida

Nov 2025 – Present

- Developed an AI-powered customer support chatbot using LLaMA 3 (Groq API) and LangGraph to automate resolution of internet connectivity and service-related queries for ISP customers.
- Implemented tool calling to fetch real-time network and service status data, reducing manual query handling by support staff.
- Built a document-based Q&A system using PyPDF2 and Tesseract OCR to help customers find answers from ISP manuals, FAQs, and service guides.
- Designed a conversation memory module using thread-based state management to maintain context across multi-turn customer interactions.
- Optimized chatbot response time using async processing and streaming, improving overall customer experience.
- Collaborated with the technical team to integrate the chatbot with existing backend systems and APIs for seamless deployment.

PROJECTS

AI Chatbot with Tool Calling & Document Intelligence | Tech: Python, LangGraph, Groq API, PyPDF2, Tesseract OCR

- Built using LLaMA 3 (Groq API) with LangGraph for agentic, multi-turn conversation flows.
- Implemented tool calling to fetch real-time weather data via OpenWeather API.
- Developed PDF and image-based Q&A using PyPDF2 and Tesseract OCR.
- Built conversation memory using thread-based state management.

- Optimized with async processing and streaming responses.

AI Insurance Premium Prediction System | Tech: Python, FastAPI, Streamlit, Scikit-learn, Pandas, Git

- Developed an ML-based insurance premium prediction system using Python and Scikit-learn.
- Built RESTful APIs with FastAPI for real-time premium prediction and backend processing.
- Designed an interactive frontend using Streamlit for collecting customer details and showing results.
- Implemented feature engineering: BMI calculation, age grouping, lifestyle risk assessment, and city tier classification.
- Used Pydantic for input validation; integrated a trained ML model (model.pkl) for category prediction.

EXTRA ACTIVITIES & LEADERSHIP

- Solved 200+ DSA problems on GeeksforGeeks covering arrays, trees, graphs, and dynamic programming.
- Demonstrated leadership by coordinating team members, assigning tasks, and ensuring timely project delivery.
- Actively participated in problem-solving discussions and contributed innovative ideas in collaborative environments.
- Showed adaptability and ownership while working in fast-paced technical and team-based settings.
